ART UNIT PAPER NUMBER

2635

DATE MAILED: 04/11/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/296,676

Applicant(s)

CULLUM, DEVON DAVID

Examiner

Mai V Nguyen

Art Unit

2635

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 January 2002.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Response to Amendment

1. This communication is response to applicant's 01/22/2002 amendment in the application of Cullum for "Anti-theft system and apparatus and method for selectively disabling/enabling electrical apparatus filed on 04/22/1999. The proposed amendment to the specification and claims have been entered. New claims 11-25 are entered. Claims 1-25 are pending.

Response to Arguments

2. Applicant's arguments with respect to claim 1-25 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 12 recites the limitation "the communication circuit" in page 5 of the amendment. There is insufficient antecedent basis for this limitation in the claim. The examiner considers it should be "the communication unit" instead.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claim 1-4, 6-9, 11-15, and 21-25 rejected under 35 U.S.C. 102(e) as being anticipated by Isikoff US 5,748,084.

Referring to claim 1, Isikoff in the same field of endeavor disclose an anti-theft device operable with an electronic apparatus100, the device comprising a remote intelligent communication (RIC) unit contained within a casing of the electronic apparatus and including structure that enables tracking of the electronic apparatus (col. 3, line 55-61, Fig. 2). Isikoff further discloses the RIC unit operable to receive a signal transmitted from an interrogator 110 (Fig. 1).

Isikoff inherently disclose the device (beacon) determines whether the signal is intended for the anti-theft device and whether the signal includes a shut-off command and, if so, to produce a shut-off signal in response (col. 5, line 20 – col. 6, line 15, the signal as the incoming data are interpreted by the bacon and passing the data to computer which causes disabling of power to all or specific parts of the computer).

Art Unit: 2635

Isikoff further disclose the beacon as a shut-off unit couple to a power source of the electronics apparatus, the shut off unit in a shut-off state preventing a flow of electricity via the power source in accordance with the shut-off signal (col. 4, line 14-34, the beacon control a switch to cut power to the computer 100 or various subsections).

Referring to claim 2, Isikoff disclose the beacon is also a reset device communicating with the shut-off unit including a controller 30 communicating with memory 40 and an input device 20 (receiving signal from interrogator), wherein the controller keeps the computer system in the shut-off state until a predetermined data (reset or enable) corresponding to the electronic apparatus data is entered (col. 4, line 62, - col. 5, line 11).

Referring to claim 3, Isikoff inherently discloses the device comprising a code reset device, the shut-off unit remaining in the shut-off state until a predetermined code is input to the reset device (col. 4, line 3-, the beacon shuts the computer down when it has not received an authorization call via cellular network).

Referring to claim 4, Isikoff disclose the device comprising a message activating unit communicating with the RIC unit, the message activating unit activating a message in accordance with the shut-off signal (col. 5, line 34-44, the computer having a software interface provides an visual indication the computer system has been disable because the system was reported stolen).

Referring to claims 6-9, it is noted that claims 6-9 claim the same elements as claim 1-4. Therefore, claims 6-9 are rejected for the same reasons with respect to claim 1-4.

Referring to claim 11, it is noted that claim 11 repeatedly claims elements as claim 1. Furthermore, Isikoff disclose the device having a transceiver 10 coupled to the control circuit (beacon) (Fig. 3).

Referring to claims 12 and 13, Isikoff disclose the communication unit comprising a transmitter 10 (transceiver) and control circuit 45 produces a return signal that is transmitted to the interrogator via transmitter 10 to provide tracking data for the electronic apparatus (Abstract). Isikoff further discloses the data comprising location coordinates derived from a GPS (col. 10, line 11-31).

Referring to claim 14, Isikoff inherently discloses the communication unit wherein the transmitter and control circuit produce a return signal that is transmitted to the interrogator via the transmitter to acknowledge receipt of the signal including the electronic apparatus shut-off command (col. 2, line 46-66 and col. 5, line 35-44, the anti-theft device provides two-way RF communication and the beacon response the current status of computer).

Referring to claim 15, it is noted that claim 15 repeatedly claims elements as claim 2. Furthermore, Isikoff implies or suggests the control circuit compares input data supplies to the anti-theft device with the data stored in memory (col. 4, line 62 – col. 5, line 11, the signal received has to be authorized).

Referring to claim 21 and 22, Isikoff discloses the signal is transmitted from the interrogator via a satellite link or a cellular telephone link (col. 10, line 60-65).

Referring to claim 23, Isikoff discloses the electronic apparatus is a consumer electronic device (col. 1, line 48-53).

Referring to claim 24, Isikoff discloses the power blocking circuit is included within a packaged integrated circuit chip including other circuitry used by utilization circuitry of the electronic apparatus (col. 4, line 35-38).

Referring to claim 25, Isikoff disclose the communication unit further comprising a programmable timer for periodically waking up the communication unit from an idle mode to activate the receiver to receive the signal transmitted from the interrogator (col. 9, line 32-52, the beacon wherein the receiver located operates intermittently for receiving tracking signal).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 5, 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Isikoff in view of Heinrich et al. US 5,874,902.

Isikoff fails to disclose the anti-theft device having a fusible link. Heinrich in the same field of endeavor disclose the anti-theft device having a fusible link 113 (Fig. 12) for the purpose of keeping the anti-theft device in shut-off state unit it is fused by the RF field.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to include a fusible link in the device of Isikoff as evidenced by Heinrich because Isikoff suggests the anti-theft device having shut-off unit and Heinrich in the same field of endeavor

Art Unit: 2635

further teaches the anti-theft device including a fusible link for the purpose of keeping the anti-theft device in shut-off state until it is fused by the RF field.

8. Claim 16 and 17 rejected under 35 U.S.C. 103(a) as being unpatentable over Isikoff in view of Chesnutt US 5,966,081.

Isikoff does not disclose the data stored in memory comprising purchase data or purchaser data. Chesnutt in the same field of the endeavor discloses ID stored in the memory associated with the device for the purpose of providing unique information to each different device (Abstract). Furthermore, one skilled in the art recognizes that it is well known to store purchaser data for the purpose of providing personal identification when the device is recovered.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to store purchase data or purchaser data in the device of Isikoff as evidenced by Chesnutt because Isikoff suggests the code stored in the memory; Chesnutt further teaches the ID associated with the device being stored in memory; and one skilled in the art recognizes that it is well known to stored purchaser data for the purpose of providing personal identification when the device is recovered.

9. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Isikoff in view of Glenn US 5,406,261.

Isikoff does not disclose the detail of the blocking circuit. Glenn discloses the power control including transistor having a current path connected between the power source 22 of the electronic apparatus and utilization circuit (system board 20, floppy disk drive 24), and a control terminal supplied with the shut-off signal (control function) (Fig. 8b).

Art Unit: 2635

It would have been obvious to one of ordinary skill in the art at the time the invention was made to include the transistor to the blocking circuit in the device of Isikoff as evidenced by Glenn because Isikoff suggest the anti-theft device having a blocking circuit to cut off the power supply and Glenn teaches in detail of the blocking circuit having a transistor wherein current path is connected between the power source of the electronic apparatus and utilization circuit, and a control terminal supplied with the shut-off signal.

10. Claim 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Isikoff in view of Glenn and further view of Heinrich et al.

Isikoff does not disclose the detail of the blocking circuit. Glenn discloses the power control including a first transistor and a second transistor having a current path connected between the power source 22 of the electronic apparatus and utilization circuit, and control terminal (Fig. 8c). Furthermore, Heinrich in the same field of endeavor disclose the anti-theft device having a fusible link 113 (Fig. 12) for the purpose of keeping the anti-theft device in shut-off state unit it is fused by the RF field. The claimed invention would be expected to perform equally well with two transistors shown in Fig. 8 of Glenn combined with a fuse of Heinrich. Both structure of blocking circuit of the claim and combined structure of blocking circuit of prior art accomplish the same result that is cutting off power by blocking the flow of electricity from the power source and utilization circuit while the control from CPU to utilization circuit is still maintained. The structure of blocking circuit having two transistors, a fuse, and a resistor appears to offer no advantage over the prior art's two transistors and a fuse; it makes no difference in performance which arrangement is employed.

Conclusion

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mai V Nguyen whose telephone number is (703) 305-0754. The examiner can normally be reached on Monday-Friday from 8 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Horabik, can be reached on (703) 305-4704. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9314.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.

Mai Nguyen.
